

A professional woman with dark hair, wearing a dark pinstripe blazer over a light blue button-down shirt, is smiling while operating a white office scanner. She is pressing a button on the control panel with her left hand and holding a stack of papers under the scanner glass with her right hand. The scanner is a large, white, flatbed model with a control panel featuring several buttons and a small display screen.

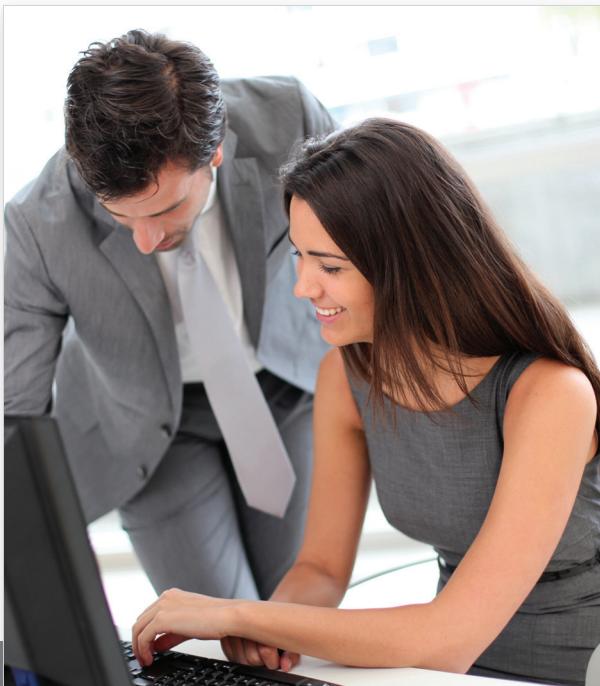

Nuance eCopy ShareScan

Breakthrough office-scanning performance

Nuance eCopy ShareScan

Automate paper processes. Unlock business potential.

A multifunction printer without **eCopy ShareScan®** is like an iPad® without apps. With eCopy ShareScan, your multifunction printers (MFPs) can do so much more than print, copy, fax, and scan.

eCopy ShareScan enables office workers to do much more than take pictures of pieces of paper, put them into folders, or attach them to generic email messages.

As easily as tapping buttons on a smart phone, office workers can convert images of text into actionable data and capture them in the information systems used to run the business—easily and securely—right from the MFP's touch screen. The results are dramatic boosts in speed, productivity, information security and accuracy, records compliance, and environmental and cost savings.

Empower employees.

A fast, easy, and accurate solution for everyone—not just the scanner guy.

For breakthrough office-scanning performance and maximum ROI, you need a solution that not only automates the big jobs, but one that accelerates the small, ad-hoc ones, too. At the same time, such a solution must be so easy to use that no training is needed.

This means everyone can get their jobs done quickly and accurately—all in compliance with records management and information security policies. This solution for all of this and more: eCopy ShareScan.

Peace of mind.

Rest assured it's done right—the first time, every time.

Preserve critical content, so you can find it when you need it. Information is the lifeblood of business. Data integrity and security start with your data-capture processes. eCopy ShareScan sets the standard with unique features that ensure documents are captured correctly the first time, every time, in compliance with the most stringent records management standards.

Auto-preview: An ounce of prevention

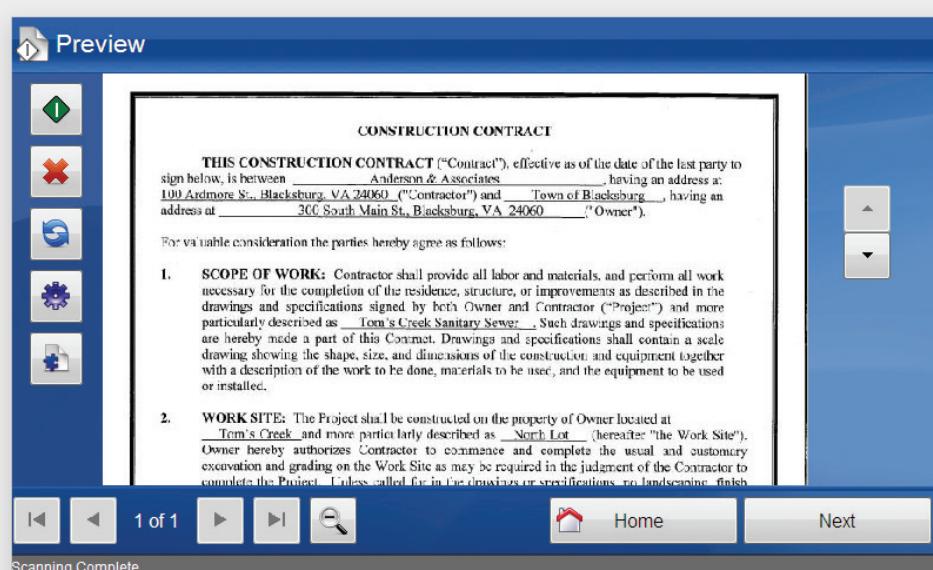

is worth a pound of cure. Have you ever felt confused by how to orient a document on the glass, in the feeder or how to activate duplex scanning? If so, you're not alone. Auto-preview shows users how the document was scanned and lets you correct mistakes before it becomes a problem.

Real-time job validation and error correction:

There's no time like the present. According to a recent InfoTrends study, over 50% of companies shred documents after they are scanned—making permanent data loss a real possibility. With real-time validation—used in combination with auto-preview—you can scan and shred with confidence that your documents are safe and sound where you want them.

Highly accurate OCR: Over 98% accurate.

100% usable. eCopy ShareScan OCR (optical character recognition) is up to 50% more accurate than the competition—ensuring your documents can be found or edited immediately.

With eCopy ShareScan Auto-preview, you can correct mistakes before the document is stored or delivered.

eCopy ShareScan's real-time validation eliminates risk of permanent data loss, letting you shred with confidence once a document is scanned.

<p>Interactive Video on the Internet</p> <p>Two meetings held recently in Philadelphia outlined the future promise of interactive media and the surprising power of current technology already available to many.</p> <p>Dr. John S. Mayo, President of AT&T Bell Laboratories, delivered an address entitled "The Promise of the Multimedia Revolution" in the sensational confines of the Omnimax Theatre of the Franklin Institute on May 13, 1994. Dr. Mayo defined multi-media as "networked multi-media communications," a definition that overarches the common assumption of multi-media as a simple combination of data, video and sound. The honored recipient of the National Science Medal predicted that this new technology will powerfully affect society, and that people's relationships will evolve via telepresence. Geographically separated families will enjoy holidays "together" via multi-media communications.</p>	<p>pc, video camera, phone, fax, copier and sound system, and these devices must focus on ease of use. Speech and handwriting recognition are being pursued in this quest for universal ease of use.</p> <p>"By 2000, Virtual Reality will be emerging as a consumer service," foresees Dr. Mayo, "and eventually we will be able to feel the wallpaper remotely." Once again, Dr. Mayo expands common definitions, so that Virtual Reality includes not only sight and sound, but even touch and other sensations. "You eventually will have Virtual Reality that feels much like this," Dr. Mayo promises, referring to the overwhelming experience of the Omnimax Theatre in which he was speaking. Via this rich telepresence, we will be able to play with gadgets in Tokyo electronics shops, and caress the fabric of designer gowns in Paris, right from our own homes.</p> <p>Such bold predictions of almost science fiction-like technology promise a very exciting and different future. A presentation a few hours later, and a few miles west, offered an even more surprising view of what people are doing right now.</p>	<p>In pursuit of the crucial "ease of use" that Dr. Mayo described, MOSAIC was developed at the National Super Computer Association to provide a simple, graphical interface to the Internet. For users who have come to expect the "friendliness" of point and click interfaces, MOSAIC will feel right at home. After the presentation, users were encouraged to visit the computer lab for a first hand experience. Even computer novices were quickly comfortable on the system, and were merrily viewing text and images from all over the Internet-linked world.</p> <p>But the most surprising, almost instant fulfillment of Dr. Mayo's predictions came during Mr. Updegrove's presentation. Because it is a graphical environment, MOSAIC has the ability to display multiple pages, or screens, simultaneously. These views can hold text, pictures and video from multiple sources. This is the ideal environment for the electronic library, because many "books" can be open and visible, complete with all of their components. And then, Mr. Updegrove opened up a live video window.</p> <p>caress the fabric of designer gowns in Paris, right from our own homes.</p> <p>Such bold predictions of almost science fiction-like technology promise a very exciting and different future. Nuance eCopy ShareScan

With eCopy ShareScan, layout and font are faithfully preserved.

Other OCR programs

Other OCR programs result in too many spelling, layout, and font errors.

Share and collaborate.

Share dynamic electronic documents, on-premise or in the cloud.

Free your information from the constraints of paper. How? By transforming paper-based data into dynamic electronic documents that flow seamlessly and securely through your existing systems to reach contacts, colleagues, and customers.

Leverage the collaboration solutions you use.

Only eCopy ShareScan fully integrates the user experience at the MFP with the most popular directory, email, fax, and collaboration systems, including Microsoft Exchange, Microsoft SharePoint, Microsoft Office 365, IBM Lotus Notes, Gmail, OpenText Fax Server RightFax Edition, and any other fax solutions and WebDav-accessible solutions.

Edit PDFs.

Do more with documents than just scan them.

With scanning, the destination is often where the journey begins. According to InfoTrends, over 50% of companies reporting scanning to desktop PCs from MFPs. Why? Because properly processing documents often requires applying human intelligence, which means that without eCopy ShareScan, getting document capture right is a guessing game.

eCopy ShareScan addresses these challenges and comes standard with a powerful WYSIWG PDF editor, eCopy PDF Pro Office, that is optimized for business professionals who work with both native and digitized (scanned) PDF. PDF Pro Office integrates with the MFP using a unique inbox that puts scanned content—from the MFP down the hall—just a mouse click away in the system tray on the user's desktop.

Improve the way you manage your info.

Manage your documents.

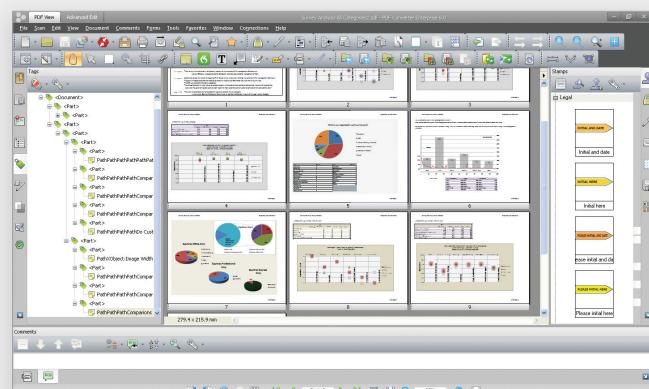

Comply with records policy.

Manage your information.

Don't let your information manage you.

Only eCopy ShareScan has real-time dynamic API-level connectors to leading document management systems and other enterprise systems such as Salesforce.com, HP Trim, Sage, and more.

These connectors give users access to the document management features they need to make sure documents are moved into electronic workflows instantly, saving time to get transactions processed, documents delivered, or to share content among teams.

Convert PDFs. Edit in Word.

eCopy ShareScan also makes repurposing content captured from a hardcopy original in Microsoft Office extremely easy. A unique file-conversion engine transforms a scanned document image into a “flowing text” document or a spreadsheet. As a result, users gain a truly editable copy with faithfully reproduced and flawlessly formatted paragraphs, margins, columns, tables, and illustrations.

Accelerate business processes.

Automate process, grow your profits.

Save time. Be more productive.

Digitizing analog documents with eCopy ShareScan can save time and deliver big productivity gains by making information more searchable, accessible, and useful. Also, once documents are in digital form, eCopy ShareScan can apply advanced automation to accelerate business processes.

Whether you need to capture data from paper forms, systematically batch and organize documents, validate data, redact information, bates stamp documents, or track and allocate costs for recovery, eCopy ShareScan delivers.

The right solution for any sized customer.

Deploy rapidly. Control completely. Expand infinitely.

eCopy ShareScan installs extremely fast—installing on your server in under 10 minutes. And unlike workflow toolkits, the eCopy ShareScan’s centralized management console makes quick work of configuring, testing, securing, and deploying scanning workflow profiles for all users and device groups—regardless of make and model.

Plus, eCopy ShareScan monitors and reports scanning activity across your entire fleet, giving you complete visibility and control. With an open API and a third-party development community, eCopy ShareScan gives you infinite options for expansion.

Choose the eCopy ShareScan solution that is right for you.

eCopy ShareScan offers all functionality your organization requires, but Nuance recognizes that one size does not fit all.

– Don’t need all the bells and whistles?

With eCopy ShareScan, you don’t have to pay for what you don’t use.

– Want to walk before you run?

eCopy ShareScan can be extended with modules to connect and automate more.

– Need to automate a critical process?

eCopy ShareScan has the solution for you.

– Have more than one MFP, each with different user requirements? eCopy ShareScan editions can be mixed and matched in a single installation for optimum advantage. All eCopy ShareScan levels are built around the same core engine and managed through the same console.

– Worried about getting trapped by a wrong choice? With eCopy ShareScan, there are no bad choices. Each level is an extensible platform.

For these reasons, Nuance offers eCopy ShareScan in four feature levels:

1 eCopy ShareScan Elements:

The features every business needs, at a price any can afford.

2 eCopy ShareScan Office: Preserve the lifeblood of your business: information.

3 eCopy ShareScan Suite: Full functionality for businesses in the fast lane.

4 eCopy ScanStation: This freestanding kiosk turns any MFP or scanner into a full-service automation station. Additionally, each version of eCopy ShareScan Elements can run as a kiosk on Microsoft Windows.
