

**Using MOBOTIX Thermal Cameras in your operations helps in many different ways.** Traditionally, the ability to monitor surface temperatures, as with heat-sensitive manufacturing operations, has made thermal cameras an important element to any intelligent security solution.

At Konica Minolta, we know that today many organizations are choosing to use thermal camera imagery as a first level screening for employees and visitors into a facility. When positioned closely to an individual's face, this first level provides alerts when out of a prescribed surface temperature range.

## WHAT YOU NEED TO KNOW

We have created a thermal bundle with our M16 MOBOTIX Thermal Indoor/Outdoor cameras and optional KMPF available. You can work with our professional services team to install and calibrate your cameras in your unique environment.

As with all of our MOBOTIX intelligent security solutions, these reliable, German-built video surveillance cameras give you unparallelled clarity with images in regular light, low-light and thermal views.

## WHY IS THIS EASY?

We have bundled our MOBOTIX thermal radiometry cameras with Konica Minolta's professional services and financing options so your organization can easily install the system you need.

- If being purchased for facility screenings, be sure to only install your camera indoors within a controlled environment.
- ✓ The people you are screening will need to remove their glasses, hats and masks, and they should look at the camera with their mouth closed.

\*Konica Minolta offers a Face Mask Detection Solution that integrates with the MOBOTIX M16 camera. Contact us for more details on this offering.

#### YOUR RESPONSIBILITY

- Power over Ethernet (PoE) Switch
- DHCP-Enabled Network
- Outbound (WAN) Internet Access
- Non-contact, Medical-grade Thermometer
- Camera Installation and/or Mounting

#### **KONICA MINOLTA PROVIDES**
